SAFETY INFORMATION

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

В

С

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

- Safety Precautions for those who Service this Unit.
- When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

Caution:

- 1. During repair or tests, minimum distance of 13cm from the focus lens must be kept.
- 2. During repair or tests, do not view laser beam for 10 seconds or longer.

CAUTION:

USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

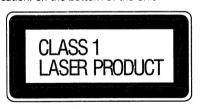

CAUTION

This product contains a laser diode of higher class than 1. To ensure continued safety, do not remove any covers or attempt to gain access to the inside of the product.

Refer all servicing to qualified personnel.

The following caution label appears on your unit.

Location: on the bottom of the unit

DEH-P880PRS/XN/UC

Fn

2

В

D

Ε

WARNING!

The AEL (accessible emission level) of the laser power output is less than CLASS 1 but the laser component is capable of emitting radiation exceeding the limit for CLASS 1.

A specially instructed person should do servicing operation of the apparatus.

Laser diode characteristics

Wave length: 785~814nm

Maximum output: 1190µW(Emitting period: unlimited)

Additional Laser Caution

Transistors Q101 in PCB drive the laser diodes.

When Q101 is shorted between their terminals, the laser diodes will radiate beam. If the top cover is removed with no disc loaded while such short-circuit is continued, the naked eyes may be exposed to the laser beam.

Service Precautions

- 1. You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.
- 2. This product memorizes every audio setting value during operating product such as VOL position and EQ setting. As the setting value is recorded in the built-in EEPROM, it does not return to the initial setting value even if you press RESET key.

If you return it to the initial setting value, execute the Audio Reset in the initial setting menu. However, if you execute it, the user setting is deleted.

If you change the audio setting when repairing the product, the product is returned to the user with that setting, so take care of it.

Method of Audio Reset

After pressing MULTI-CONTROL key for two seconds, select Audio Reset by right and left rotation. After shifting to the reset confirmation screen by right-pressing MULTI-CONTROL key and execute the reset by center-pressing.

CD Section Precaution

- 1. Before disassembling the unit, be sure to turn off the power. Unplugging and plugging the connectors during power-on mode may damage the ICs inside the unit.
- 2. To protect the pickup unit from electrostatic discharge during servicing, take an appropriate treatment (shorting-solder) by referring to "the DISASSEMBLY".
- 3. After replacing the pickup unit, be sure to check the grating.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol. Please be sure to confirm and follow these procedures.

1. Product safety

1

В

C

D

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

2 Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

3 Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

(4) Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

(5) Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

6 Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

9 There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

NOTES: • Parts marked by " * " are generally unavailable because they are not in our Master Spare Parts List.

- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screw adjacent to\mark on the product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions, apply as you think it appropriate.)

5. ELECTRICAL PARTS LIST

NOTE:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor

 $RS1/\bigcirc S\bigcirc\bigcirc\bigcirc J, RS1/\bigcirc\bigcirc S\bigcirc\bigcirc\bigcirc J$

Chip Capacitor (except for CQS.....)

CKS....., CCS....., CSZS.....

• The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

В

• Meaning of the figures and others in the parentheses in the parts list.

Example) IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.

IC 301 (A, 91, 111) IC NJM2068V

6. ADJUSTMENT 6.1 OEL ADJUSTMENT

< When the OEL Unit has been replaced>

1. Use VR1861 to adjust the resistance between IREF and OELG to 3.4 k $\!\Omega_{\cdot}$

DEH-P880PRS/XN/UC

76

F

3

1) Cautions on adjustments

• In this product the single voltage (3.3V) is used for the regulator. The reference voltage is the REFO1 (1.65V) instead of the GND.

If you should mistakenly short the REFO1 with the GND during adjustment, accurate voltage will not be obtained, and the servo's misoperation will apply excessive shock to the pickup. To avoid such problems:

a. Do not mix up the REFO1 with the GND when connecting the (-) probe of measuring instruments. Especially on an oscilloscope, avoid connecting the (-) probe for CH1 to the GND.

b. In many cases, measuring instruments have the same potential as that for the (-) probe. Be sure to set the measuring instruments to the floating state.

c. If you have mistakenly connected the REFO1 to the GND, turn off the regulator or the power immediately.

- · Before mounting and removing filters or leads for adjustment, be sure to turn off the regulator.
- · For stable circuit operation, keep the mechanism operating for about one minute or more after the regulator is turned on.
- In the test mode, any software protections will not work. Avoid applying any mechanical or electrical shock to the mechanism during adjustment.
- · The RFI and RFO signals with a wide frequency range are easy to oscillate. When observing the signals, insert a resistor of 1k ohms in series.
- The load and eject operation is not guarantied with the mechanism upside down. If the mechanism is blocked due to mistaken eject operation, reset the product or turn off and on the ACC to restore it.

2) Test mode

This mode is used to adjust the CD mechanism module.

· To enter the test mode.

While pressing the EJECT and DISP keys at the same time, reset.

· To exit from the test mode.

Turn off the ACC and back up.

Notes:

a. During ejection, do not press any other keys than the EJECT key until the loaded disc is ejected.

b. If you have pressed the (\rightarrow) key or (\leftarrow) key during focus search, turn off the power immediately to protect the actuator from damage caused by the lens stuck.

c. For the TR jump modes except 100TR, the track jump operation will continue even if the key is released.

d. For the CRG move and 100TR jump modes, the tracking loop will be closed at the same time when the key is released.

e. When the power is turned off and on, the jump mode is reset to the single TR (91), the RF amp gain is set to 0dB, and the auto-adjustment values are reset to the default settings.

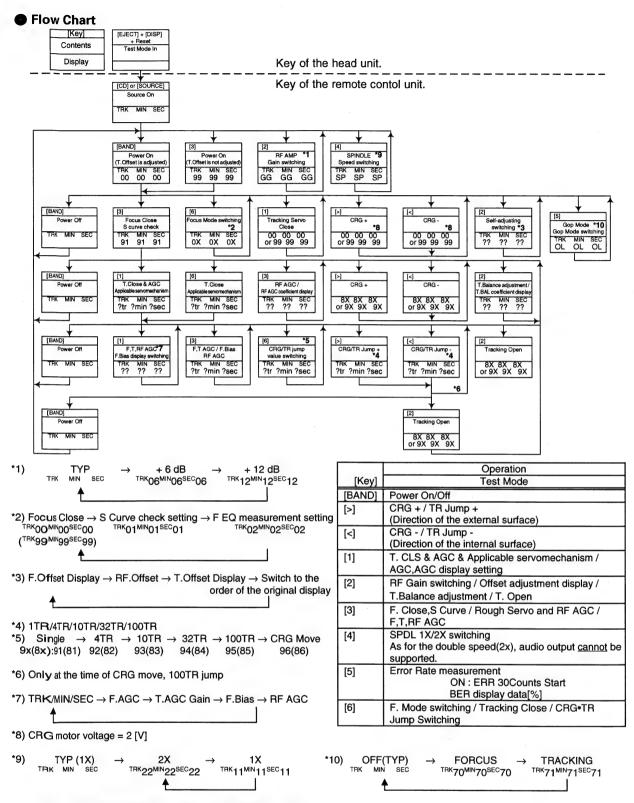

DEH-P880PRS/XN/UC 7

D

В

C

- As for the double speed (2x), audio output cannot be supported
- *) After the [Eject] key is pressed keys other than the [Eject] key should not be pressed, until disc ejection is complete.
 - When the key [2] or [3] is pressed during the Focus Search, the power supply should be immediately turned off (otherwise the lens sticks to Wall, causing the actuator to be damaged).
 - In the case of TR jump other than to 100TR, the function shall continue to be processed even if the TR jump key is released. As for the CRG Move and 100TR Jump, the mechanism shall be set to the Tracking Close mode when the key is released.
 - When the power is turned on/off the jump mode is reset to the Single TR (91) while the gain of the RFAMP is reset to 0 dB. At the sanne time all the self-adjusting values shall return to the default setting.

6.3 CHECKING THE GRATING AFTER CHANGING THE PICKUP UNIT

Note

The grating angle of the PU unit cannot be adjusted after the PU unit is changed. The PU unit in the CD mechanism module is adjusted on the production line to match the CD mechanism module and is thus the best adjusted PU unit for the CD mechanism module. Changing the PU unit is thus best considered as a last resort. However, if the PU unit must be changed, the grating should be checked using the procedure below.

Purpose

To check that the grating is within an acceptable range when the PU unit is changed.

· Symptoms of Mal-adjustment :

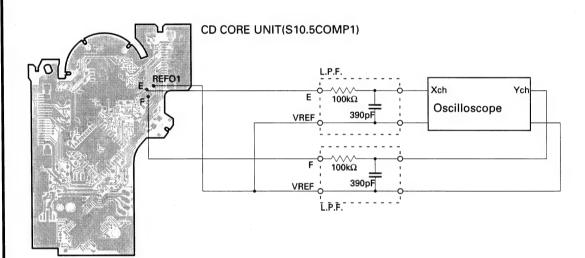

If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or taking a long time for track searching.

Method :

- Measuring Equipment
- Oscilloscope, Two L.P.F.
- Measuring Points
- E, F, REFO1 • TCD-782

DiscMode

• TEST MODE

· Checking Procedure

- 1. In test mode, load the disc and switch the 3V regulator on.
- 2. Using the \rightarrow and \leftarrow buttons, move the PU unit to the innermost track.
- 3. Press key 3 to close focus, the display should read "91". Press key 2 to implement the tracking ballance adjustment the display should now read "81". Press key 3. The display will change, returning to "81" on the fourth press.
- 4. As shown in the diagram above, monitor the LPF outputs using the oscilloscope and check that the phase difference is within 75°. Refer to the photographs supplied to determine the phase angle.
- 5. If the phase difference is determined to be greater than 75° try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75° then the mechanism should be judged to be at fault.

• Note

Because of eccentricity in the disc and a slight misalignment of the clamping center the grating waveform may be seen to "wobble" (the phase difference changes as the disc rotates). The angle specified above indicates the average angle.

Hint

Reloading the disc changes the clamp position and may decrease the "wobble".

6.4 ERROR MODE

Error Messages

If a CD is not operative or stopped during operation due to an error, the error mode is turned on and cause(s) of the error is indicated with a corresponding number. This arrangement is intended at reducing nonsense calls from the users and also for facilitating trouble analysis and repair work in servicing.

(1) Basic Indication Method

1) When SERRORM is selected for the CSMOD (CD mode area for the system), error codes are written to DMIN (minutes display area) and DSEC (seconds display area). The same data is written to DMIN and DSEC. DTNO remains in blank as before.

2) Head unit display examples

Depending on display capability of LCD used, display will vary as shown below. xx contains the error number.

8-digit display	6-digit display	4-digit display
ERROR-xx	ERR-xx	E-xx

(2) Error Code List

2) Erro	or Code List		
Code	Class	Displayed error code	Description of the code and potential cause(s)
10	Electricity	Carriage Home NG	CRG can't be moved to inner diameter.
		SERVO LSI Com-	CRG can't be moved from inner diameter.
		munication Error	ightarrow Failure on home switch or CRG move mechanism.
			Communication error between microcomputer and SERVO LSI.
11	Electricity	Focus Servo NG	Focusing not available.
			→ Stains on rear side of disc or excessive vibrations on REWRITABLE.
12	Electricity	Spindle Lock NG	Spindle not locked. Sub-code is strange (not readable).
		Subcode NG	ightarrow Failure on spindle, stains or damages on disc, or excessive vibrations.
	'		A disc not containing CD-R data is found.
			Turned over disc are found, though rarely.
			CD signal error.
17	Electricity	Setup NG	AGC protection doesn't work. Focus can be easily lost.
			ightarrow Damages or stains on disc, or excessive vibrations on REWRITABLE.
30	Electricity	Search Time Out	Failed to reach target address.
			→ CRG tracking error or damages on disc.
44	Electricity	ALL Skip	Skip setting for all track.
			(CD-R/RW)
50	Mechanism	CD On Mech Error	Mechanical error during CD ON.
			→ Defective loading motor, mechanical lock and mechanical sensor.
A0	System	Power Supply NG	Power (VD) is ground faulted.
			→ Failure on SW transistor or power supply (failure on connedor).

Remarks: Mechanical errors are not displayed (because a CD is turned off in these errors).

Unreadable TOC does not constitute an error. An intended operation continues in this case.

Upper digits of an error code are subdivided as shown below:

1x: Setup relevant errors, 3x: Search relevant errors, Ax: Other errors.

6.5 E.VOL IC OSCILLATING FREQUENCY ADJUSTMENT

Specification	Measuring point	Adjustment point	Remarks
400 kHz ± 10 kHz	IC281 (Pin 49) TP•CPF	VR281 (for source other than AM)	Beat may be generated for AM

Note)

В

D

The frequency is always 400 kHz for the sources other than AM, however, it may become 514 kHz by received frequency for AM, adjust it with the source other than AM.

6.6 SYSTEM MICROCOMPUTER TEST PROGRAM

PCL output

In the normal operation mode (with the detachable panel installed, the ACC switched ON, the standby mode cancelled), shift the TEST1 (Pin 86) terminal to H.

The clock signal is output from the PCL1 terminal (Pin 37).

The frequency of the clock signal is 468.750 kHz that is one 32nd of the fundamental frequency.

The clock signal should be $468.750 \text{ kHz} \pm 13 \text{ Hz}$.

If the clock signal is out of the range, the X'tal (X601) should be replaced with new one.

Tuner Amp Unit

Fig.3

4

How to hold the Mechanism Unit

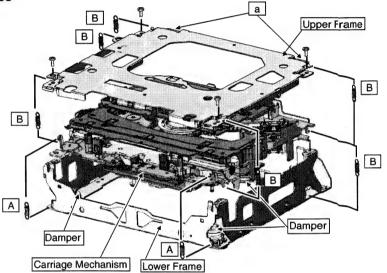

- 1. Hold the Upper and Lower Frames.
- 2. Do not hold the front portion of the Upper Frame, because it is not very solid.

Removing the Upper and Lower Frames

- With a disc inserted and clamped in the mechanism, remove the two Springs (A), the six Springs (B), and the four Screws.
- 2. Turn the Upper Frame using the part "a" as a pivot, and remove the Upper Frame.
- 3. While lifting the Carriage Mechanism, remove it from the three Dampers.

Caution: When assembling, be sure to apply some alcohol to the Dampers and assemble the mechanism in a clamped state.

В

С

D

Ε

F

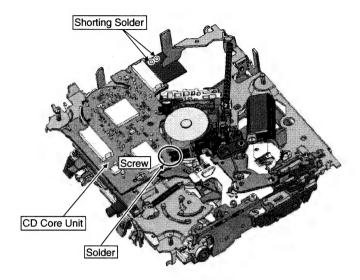

- Apply Shorting Solder to the flexible cable of the Pickup, and disconnect it from the connector.
- 2. Unsolder the four leads, and loosen the Screw.
- 3. Remove the CD Core Unit.

В

D

Ε

Caution: When assembling the CD Core Unit, assemble it with the SW in a clamped state so as not to damage it.

3

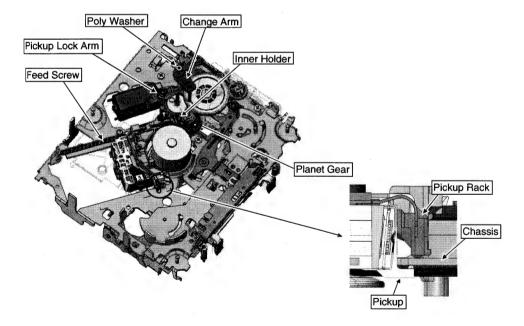

How to remove the Pickup Unit

- 1. Make the system in the carriage mechanism mode, and have it clamped.
- 2. Remove the CD Core Unit and remove the leads from the Inner Holder.
- 3. Remove the Poly Washer, Change Arm, and Pickup Lock Arm.
- 4. While releasing from the hook of the Inner Holder, lift the end of the Feed Screw.

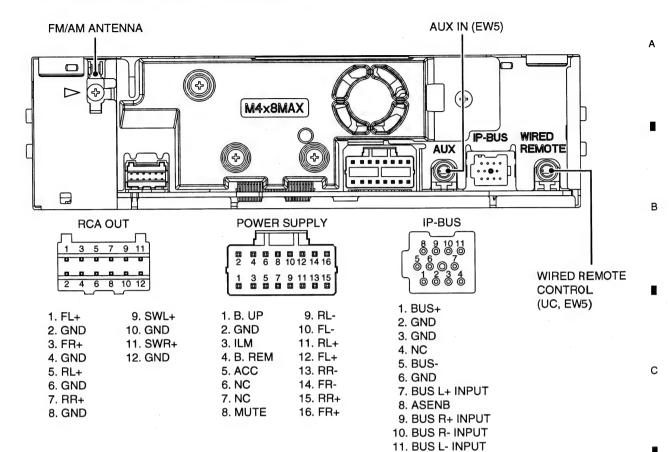

2

Caution: When assembling, move the Planet Gear to the load/eject position before setting the Feed Screw in the Inner Holder.

Assemble the sub unit side of the Pickup, taking the plate (Chassis) in-between. When treating the leads of the Load Carriage Motor Assy, do not make them loose over the Feed Screw.

● Pin Functions(PEG178A : UC and ES model, PEG176A : EW5 model)

6

			I ES model, PEG176A : EW5 model)
Pin No.	Pin Name	I/O	Function and Operation
1	TUNPCE1	0	TUNER : Chip enable output (PLL)
2	TUNPCE2	0	TUNER : Chip enable output (EEPROM)
3	DSPOUT	0	DSP, E.VOL : Data output
	DSPIN		DSP : Data input
	DSPCK	0	DSP, E.VOL : Clock output
	BYTE	Ť	External data bus width change input
	CNVSS	l i l	Processor mode change input
	IPPW	Ö	IP-BUS : Driver power supply control output
	ASENBO	0	IP-BUS : Slave ACC sense output
	RESET	 	Reset input
		 	
	XOUT	0	Crystal oscillating element connection output
	VSS		GND
	XIN	1	Crystal oscillating element connection input
	VCC		Power supply
	NMI		Not used
	RCK		RDS : Clock input (EW)
17	LDET		RDS : PLL Lock detect input (EW)
18	AMPPW	0	Power amplifier power supply control output
19	RX2	1	IP-BUS : Data input 2
	FCKSEL	0	Switch output of VCO oscillation frequency
	EVOLCS	0	E.VOL : Chip select output
	PEE	Ō	BEEP sound output
	SYSPW	ō	System power control output
	DSPPW	0	DSP : Power control output
	DALMON	0	For consumption low-current output
	MUTE	0	Mute output
	RX		IP-BUS: Data input
	TX	0	IP-BUS: Data output
29	BSO	0	PBUS : Serial data output
30	BSI	1	PBUS : Serial data input
31	BSCK	0	PBUS : Clock output
32	KEYD		Wired remote control key input (UC, EW)
33	DPDT	0	GRILLE : Data output
34	KYDT		GRILLE : Data input
35	MCKCONT		Not used
36	MCKRQ	1	Master clock request input
37	PCL	0	Output for clock adjustment
38	NC		Not used
39	RDS57K	1	RDS: 57 kHz count pulse input (EW)
40	DSP_RAMCLR	0	DSP : RAM clear output
41	INIT_RESET	0	DSP : System reset output
42	CK_RST	Ō	DSP : Clock reset output
43	DSPS_RST	Ö	DSP : System reset output
44	CKM[2]	0	DSP : Clock mode select output
45	AMTPW		Not used
46	DSPRQ	0	DSP : Interface request output
47	DSPRDY	++-	DSP: Data write ready input
48	BSRQ	+ -	PBUS : Communication request output
49	BRST	0	PBUS : Reset output
50	BRXEN	I/O	PBUS : Communication input/output
51	LRCKOK	 	DSP : Clock stability information input
52	JSNSON1	0	"H" output at Jack sense mode (UC, ES)
53	CDRESET	0_	CD : Microcomputer reset output
54	DIM WH	0	Key illumination dimmer output (White)
55	DIM BL	0	Key illumination dimmer output (Blue) (UC, ES)
56	ILMPW	0	Illumination output
57	SWVDD	0	GRILLE : Chip enable output
58	OELPW	0	OEL : Power supply output
59	MODEL	1 ĭ	Model select input (UC, ES)
60	VCC	 	Power supply
61	DSPMOD	1	DSP : STD/NW setting input
62	VSS	+ '-	GND
02	¥ 00		- CITO

Symbol	1/0	Explain	
AMANT	_	AM antenna input	AM antenna input high impedance AMANT pin is connected with an all antenna by way of 33 μH. (LAU type inductor) A series circuit
			including an inductor and a resistor is connected with RF ground for
250112			the countermeasure against the hum of power transmission line.
			Ground of antenna block
			Input of FM antenna 75 Ω Surge absorber is necessary.
			The power supply for analog block. D.C 8.4 V ± 0.3 V
	0		Output of FM/AM signals level
			Chip enable for EEPROM "Low" active
WC	1	write control	You can write EEPROM, when EEPROM write control is "Low".
			Ordinary non connection
CE1		chip enable-1	Chip enable for AF•RF "High" active
CK		clock	Clock data input
DI	1	data in	Data input
LDET	0	lock detector	"Low" active
OSCGND		osc ground	Ground of oscillator block
ROM_VDD		power supply	Power supply for EEPROM pin 13 is connected with a power supply of
			micro computer.
DO	0	data out	Data output
DGND		digital ground	Ground of digital block
COMP	0	composite output	FM composite signal output.
VDD_3.3		power supply	The power supply for digital block. 3.3 V ± 0.2 V
RDS_CK	0	RDS clock	Output of RDS clock(2.5 V)
RDS_DATA	0	RDS data	Output of RDS data(2.5 V)
RDS_LOCK	0	RDS lock	Output unit "High" active(2.5 V) (RDS_LOCK turns over by the
			external transistor. "Low" active)
RDS_HSLK	0	RDS high speed	Output unit "High" active(2.5 V)(RDS_HSLK turns over by the
		lock	external transistor. "Low" active)
ANT1		diversity antenna	Antenna switch control signal output. "High": MAIN, "Low"=SUB
		control	
Lch	0	L channel output	FM stereo "L-ch" signal output or AM audio output
Rch	0	R channel output	FM stereo "R-ch" signal output or AM audio output
	AMANT RFGND FMANT VCC SL CE2 WC CE1 CK DI LDET OSCGND ROM_VDD DO DGND COMP VDD_3.3 RDS_CK RDS_DATA RDS_LOCK RDS_HSLK ANT1 Lch	AMANT I RFGND FMANT I VCC SL O CE2 I WC I CE1 I CK I DI I LDET O OSCGND ROM_VDD DO O DGND COMP VDD_3.3 RDS_CK O RDS_DATA O RDS_LOCK O ANT1 Lch O	AMANT I AM antenna input RFGND RF ground FMANT I FM antenna input VCC power supply SL O signal level CE2 I chip enable-2 WC I write control CE1 I chip enable-1 CK I clock DI I data in LDET O lock detector OSCGND osc ground ROM_VDD power supply DO O data out DGND digital ground COMP O composite output VDD_3.3 power supply RDS_CK O RDS clock RDS_DATA O RDS clock RDS_HSLK O RDS high speed lock ANT1 diversity antenna control Lch O L channel output

Turning the unit on

Press SOURCE to turn the unit on.

When you select a source, the unit is turned on. ■

 When this unit's blue/white lead is connected to the vehicle's auto-antenna relay control terminal, the vehicle's antenna extends when this unit's source is turned on. To retract the antenna, turn the source off.

Selecting a source

You can select a source you want to listen to. To switch to the built-in CD player, load a disc in the unit.

Press SOURCE to select a source.

Press **SOURCE** repeatedly to switch between the following sources:

XM tuner—SIRIUS tuner—Tuner—Television—DVD player/Multi-DVD player—
Built-in CD player—Multi-CD player—
iPod—External unit 1—External unit 2—
AUX1—AUX2

Notes

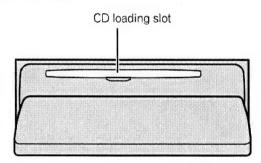

- In the following cases, the sound source will not change:
 - When there is no unit corresponding to the selected source connected to this unit.
 - When there is no disc in the unit.
 - When there is no disc in the DVD player.
 - When there is no magazine in the multi-CD player.
 - When there is no magazine in the multi-DVD player.
 - When the AUX (auxiliary input) is set to off.
- External unit refers to a Pioneer product (such as one available in the future) that, although incompatible as a source, enables control of basic functions by this unit. Two external units can be controlled by this unit. When two external units are connected, the allocation of them to external unit 1 or external unit 2 is automatically set by this unit.

Loading a disc

3

- 1 Press EJECT to open the front panel. CD loading slot appears.
- After a CD has been inserted, press SOURCE to select the built-in CD player.
- 2 Insert a CD into the CD loading slot.

Front panel is closed automatically, and playback will start.

You can eject a CD by pressing EJECT.

Notes

- The built-in CD player plays one standard, 12cm or 8-cm CD at a time. Do not use an adapter when playing 8-cm CDs.
- Do not insert anything other than a CD into the CD loading slot.
- There is sometimes a delay between starting up CD playback and the sound being issued.
 When being read, Format read is displayed.
- If you cannot insert a disc completely or if after you insert a disc the disc does not play, check that the label side of the disc is up.
 Press EJECT to eject the disc, and check the disc for damage before inserting it again.

 When the CD loading or ejecting function does not operate properly, you can eject the CD by pressing and holding EJECT while opening the front panel.

Adjusting the volume

5

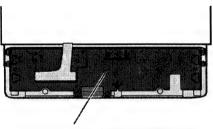

● Use VOLUME to adjust the sound level. With the head unit, rotate VOLUME to increase or decrease the volume. With the remote control, press VOLUME to increase or decrease the volume. ■

Turning the unit off

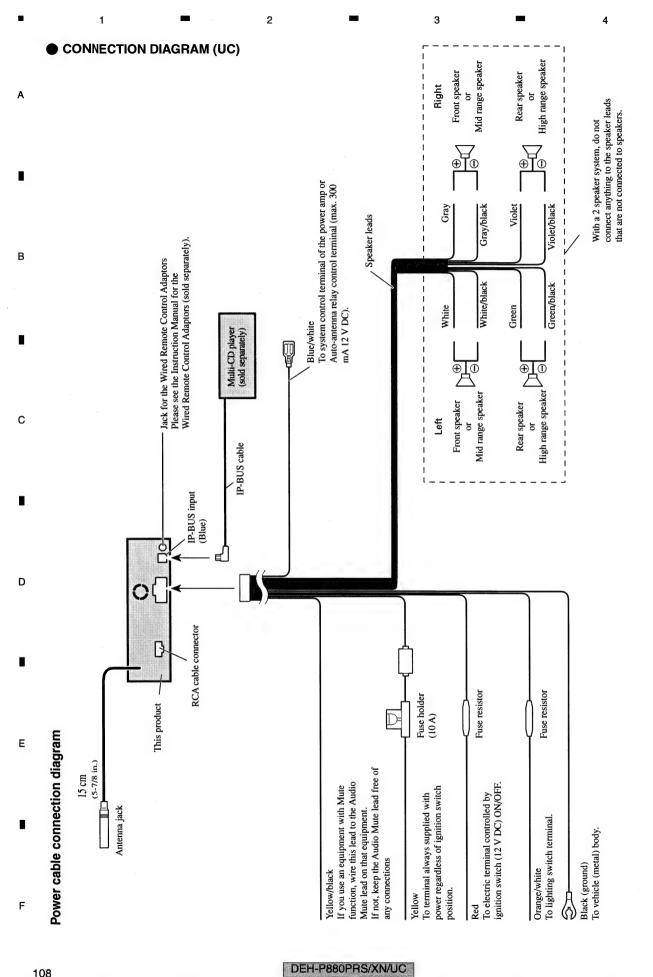

• Press SOURCE and hold until the unit turns off. •

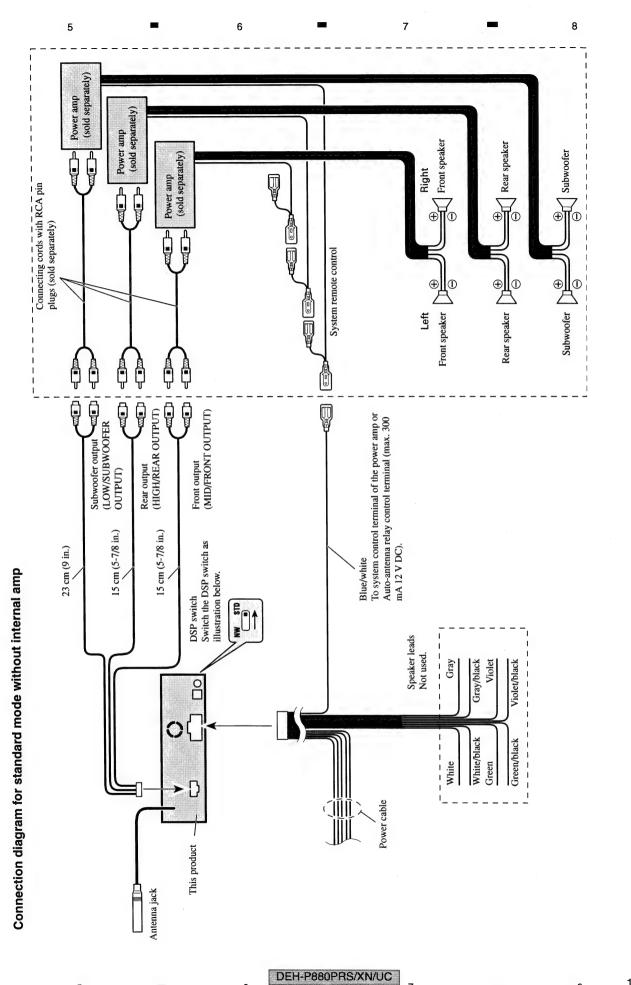

Fixing the front panel

If you do not operate the removing and attaching the front panel function, use the supplied fixing screwand fix the front panel to this unit.
